¹ Battery performance (Based on cell temperature) When T > 45 °C or T ≤ 10 °C, the battery will reduce its charging or discharging power;

Charging:

1. When SOC ≥ 80%, the voltage protection strategy will start to execute and the battery charging power will decrease;
2. When -10 °C < T ≤ 0 °C, before charging the battery cell needs to be heated to a temperature greater than 3 °C;

3. When T > 45 °C, the battery cell will reduce power due to overheating, with a maximum temperature of 54 °C;

Discharging:

1. When T < 10 °C, the battery cell will reduce power due to low temperature, with a minimum temperature of -20 °C;
2. When T > 45 °C, the battery cell will reduce power due to overheating, with a maximum temperature of 58 °C;
