## NEW *R*32 **MRV7S** DC INVERTER

An advanced VRF system integrating technology, safety and efficiency for modern solutions.

## Outdoor Units With Front Discharge

### SPECIFICALLY TAILORED FOR THE EUROPEAN MARKET

The new **R32 MRV7 S** system offers a powerful combination of high energy efficiency, innovative design, and a steadfast commitment to safety and environmental responsibility. This system not only enhances operational performance and simplifies installation procedures but also strengthens leak

protection and significantly increases system flexibility. The **MRV7 S** is suitable for a diverse array of applications across vertical markets and is available in **4,5 & 6 HP single fan** and **8,10 & 12HP double fan** both with front discharge.

### INTEGRATING DESIGN WITH EFFICIENCY

The introduction of the R32 **MRV7 S** emphasises Haier's dedication to transitioning its MRV range from R410A to R32. This innovative solution positions Haier at the forefront by boosting energy efficiency by up to 17%, implementing advanced safety features to prevent refrigerant leaks, and providing increased flexibility in installation, equipment control, and connectivity.

The **MRV7 S** incorporates a suite of innovative technologies to optimise efficiencies and operational costs. These include a dual-screw DC inverter compressor, which not only boosts efficiency but also reduces noise. A high efficiency stepless axial fan is engineered to move large volumes of air with minimal power consumption, contributing to sustainability through its robust design.

The **MRV7 S** boasts a scalable and modular architecture, expertly designed to accommodate the specific needs of each individual project. It offers broad compatibility with a variety of indoor unit types, including wall-mounted, cassette, and ducted units, alongside extended pipe lengths up to 400 meters. This allows for highly adaptable configurations that seamlessly integrate with centralised control systems. From compact spaces to expansive infrastructures, the system guarantees customised comfort, without compromising on performance or efficiency.

### INTEGRATING SAFETY WITH PRECISION

The **MRV7 S** is engineered with a multi-zone leak detection system, providing comprehensive safety through built-in leak detectors in all our indoor units. The system incorporates visual and audible alarms within the new controllers. For added flexibility, an optional automatic shut-off valve can be installed, supported by a battery-powered emergency function, which is especially useful during power outages. This feature also allows

for zone segregation, enabling the valve to isolate refrigerant and prevent leaks.

These advanced safety protocols are built-in to proactively manage and reduce risks throughout the product's lifecycle, from its initial design to its day-to-day operation, fully compliant with the new EU regulation 573/2024.

### INTEGRATING INSTALLATION AND CONTROL FLEXIBILITY

The **MRV7 S** is designed for streamlined installation and maintenance. It incorporates innovative features like Space-Link technology, a novel protocol that provides installers with unparalleled flexibility in wiring the communications network, moving away from the traditional chain method. This results in simplified wiring, faster installation times, and reduced cabling needs. Furthermore, the integrated self-clean functions for both indoor and outdoor units not only ensure cleaner air quality but also minimize the accumulation of dirt and bacteria, thereby extending maintenance intervals.

To further enhance efficiency, the **MRV7 S** features automatic addressing functionality. This simplifies the commissioning process by automatically assigning unique addresses to each indoor unit, eliminating the need for manual configuration. This is

particularly advantageous for larger VRF systems with numerous indoor units, making both installation and commissioning processes more efficient and user-friendly. The new R32 MRV indoor units are all backward compatible with R410A refrigerant, reducing complexity from logistics to installation.

The new controller has been given a communication protocol upgrade, with a smart interface which is compatible with both R32 and R410A indoor units. Integrated with faster communication and zero-latency operation. Furthermore, the system features **AVRA-AI** for intelligent refrigerant control and advanced communication protocols, allowing for faster installation and more precise system control. Each component is meticulously designed to provide practical, real-world solutions.

## MRV7 S - INTEGRATING NEW FEATURES

The New R32 MRV7 S by Haier is the latest generation of VRF systems developed to meet European F-Gas Regulation 573/2024, using low-GWP R32 refrigerant. Specifically designed for the European market, it brings together advanced energy efficiency, cutting edge technology, and a strong commitment to safety and environmental sustainability. This system not only enhances operational performance but also simplifies installation, reinforces leak protection, and ensures adaptability across a multitude of applications including commercial, residential, and hospitality to name a few.

### High efficiency DC motor

- DC fan motor with stepless inverter control, from 0 to 91Hz.
- Offering a 17% efficiency improvement over regular DC motors

### Axial flow fan

- Ø824mm axial flow fan
- Reduces the airflow resistance at high speed
- Reduces the noise by 3 dB

### Compressor

- Low-Noise, High-Efficiency, Twin-Rotary Inverter Compressor.
- Built-in exhaust noise reduction design, reducing compressor airflow noise
- The compressor adopts new vibration-absorbing materials, combined with rubber damping pads, completely isolating the compressor from the housing, reducing compressor rotational noise and vibrations

### Electronic control module

- The variable frequency drive control is designed to use high performance vector control without a position sensor. This achieves a control accuracy of up to 0.01rps, thereby making operation more stable, drives higher efficiencies and ensures best capacity management.
- Refrigeration of PCB for optimal performance of electronic system in hot ambient temperatures

### Heat exchanger - coating

- Better corrosion resistance
- Better defrost performance
- Reduces dirt accumulation
- Improves heat exchange, maximising seasonal efficiency

### Refrigerant flow path silencer

- Effectively eliminating refrigerant flow noise

### Gas-liquid separator

- Equipped with a larger-sized gas-liquid separator, it ensures a more reliable system operation.

### High efficiency oil separator

- Faster and more efficient separation

# MRV7 S

## Outdoor Units With Front Discharge

# R32

### R32 LOW GWP

R32 refrigerant has an Ozone Depletion Potential (ODP) of 0 and a Global Warming Potential (GWP) of 675. This means it has no damaging effect on the ozone layer and boasts a 68% lower GWP compared to R410A. The 60335 regulation introduces new safety standards for R32 VRF systems, presenting new design challenges. The R32 MRV7 S front discharge unit is engineered to comply with these standards as well as minimize its carbon footprint.

### SIMPLE INDOOR UNIT (IDU) ADDRESSING

The MRV7 S uses automatic addressing mode to set the IDU and ODU (Outdoor Unit) addresses. If the AC system is powered off, the original address will be retained, this solves the pain point of resetting the address after the power failure.

Two options for addressing the indoor units:

- Use the indoor unit's PCB board dip setting addressing **or**
- Use wired controller set the indoor unit addressing

### EASY INSTALLATION AND MAINTENANCE

"888" test panel: all running data & errors can be checked from the "888" screen. Rotary switch design for easy set up and faster parameter checking.

Total pipe length is up to 300m (single fan), 400m (double fan) for complete installation flexibility.

External static pressure is up to 35Pa (single fan), 45Pa (double fan). Unlike a top discharge unit, you do not require an additional ventilation hood.

The ODU can be directly connected to a centralised control system without the need for Modbus.

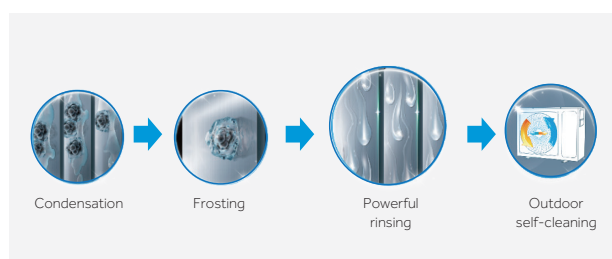

### SELF CLEAN TECHNOLOGY

Both indoor and outdoor units benefit from Haier's Self Clean functionality without stopping the compressor and distributing the operation of the unit.

The cold expansion technology forms a layer of frost on the evaporator/condenser which

generates a strong force of cold expansion that easily removes dirt from the surface.

The IDU uses the waste heat of the ODU to defrost the heat exchanger, to dry the condensed water, effectively prevent mold breeding.

## BUILT-IN R32 LEAK DETECTION WITH SHUT-OFF VALVE

The system is engineered for safety, which automatically detects refrigerant leaks. Upon detection, it activates visual and audible alarms and immediately isolates the affected areas using an automatic shut-off valve.

### ODU SHUT-OFF VALVE

Scenario 1: Outdoor unit directly connected to indoor units (without shut off kit) will shut down the whole system.

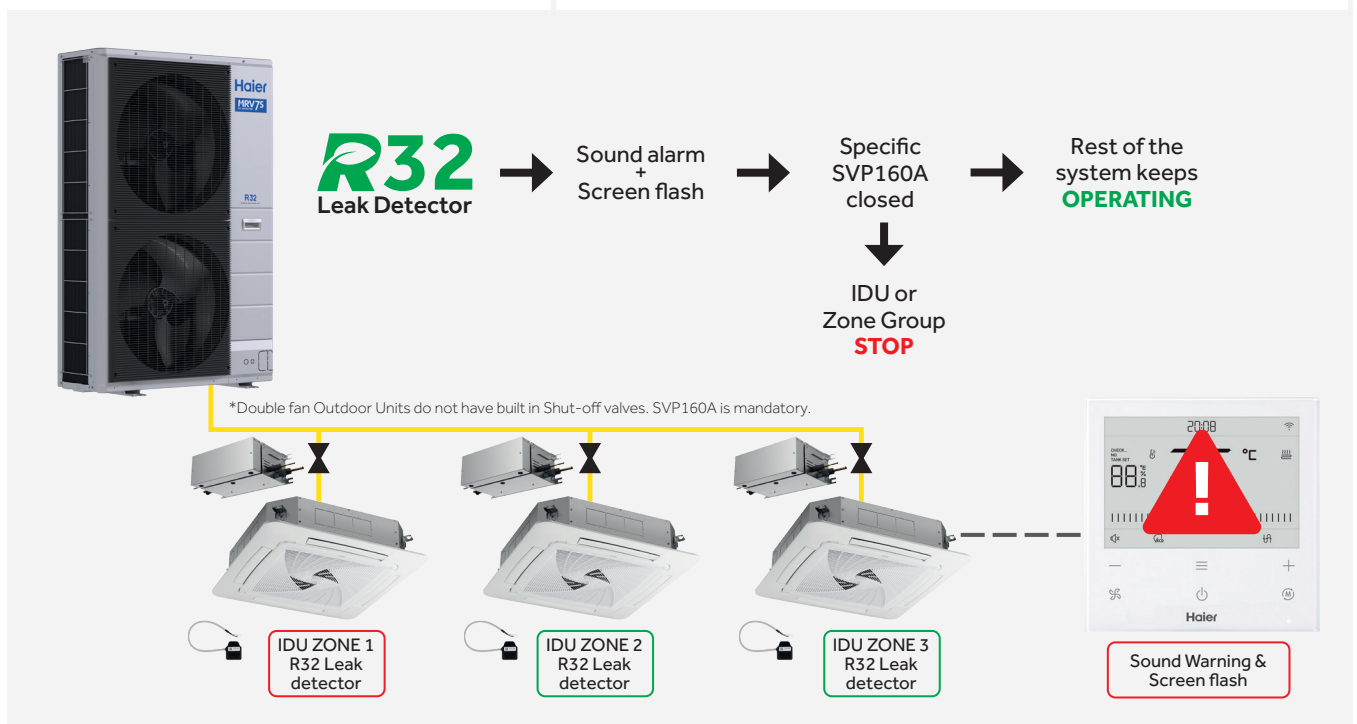

### SHUT-OFF VALVE BOX (SVP-160A)

Scenario 2: Outdoor unit connects to VRF indoor unit with shut-off valve kit to allow for localised isolation

**SVP-160A** is an automatic shut-off valve that isolates only the circuit zone where a refrigerant leak is detected, while maintaining normal operation across the rest of the system. A single SVP box can support **up to 5 indoor units** with a maximum **total indoor capacity of 18 kW**.

# MRV7 S

## Outdoor Units With Front Discharge

R32

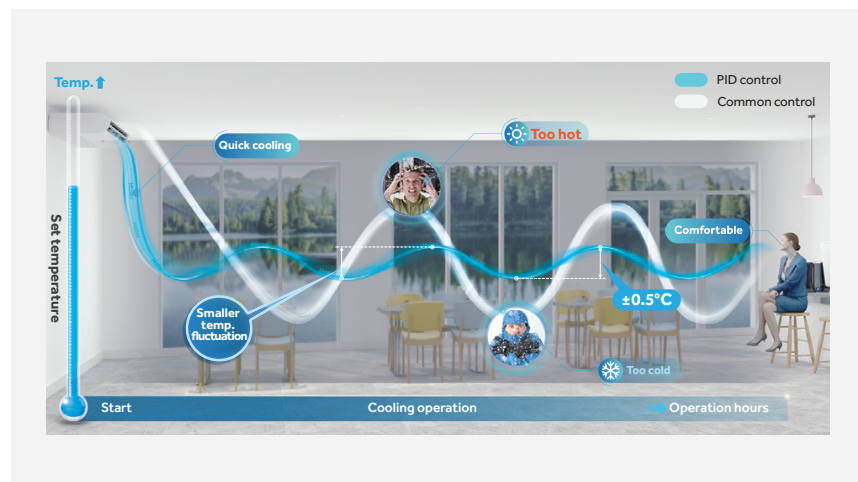

### DIAMOND SHIELD-R32 SAFETY PROTECTION

- **Software:** new version of the MRV selection software calculates the amount of refrigerant in the room and alerts if the safety limit is exceeded.
- **Alarm:** the wired controller, panel and wall-mounted refrigerant detector can trigger a sound and light alarm in the case of a refrigerant leak.
- **Battery:** SVP160A are equipped with a back-up battery, in order to supply power to close the shut off valves in the event of a system power failure.
- **Leak Detectors:** Indoor units are equipped with built in leak detectors. There is no need to replace them after detection.
- **Recovery:** In the case of a leakage, the system can recover the R32 refrigerant to the ODU and will be isolated by the shut off valves (single fan ODU). Unaffected units with SVP160A will continue operation, providing comfortable temperature to the user.
- **Shut off valve:** the 4/5/6 HP MRV7 S outdoor units are equipped with built-in R32 shut off valves.

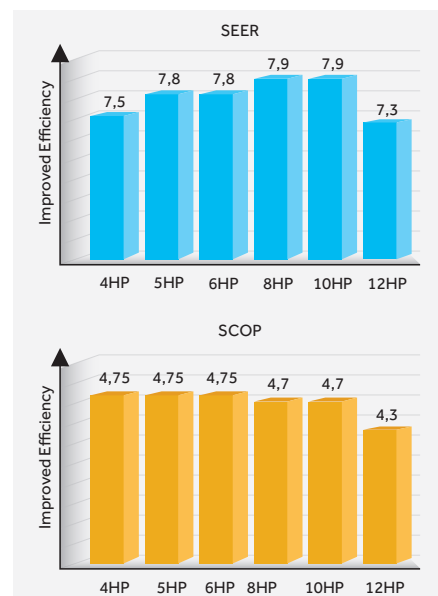

For the 8/10/12 HP MRV7 S outdoor units, an optional external shut off valve box (SVP160A) can be installed wherever it is necessary.

### INTELLIGENT CONTROL MODE

The intelligent control mode enable quick cooling and heating, which increases the compressor output. The double pressure sensor with PID control technology enables temperature control to  $\pm 0.5^{\circ}\text{C}$ , for optimum indoor air comfort.

### MRV7 S - EFFICIENCY

### AVRA (ADVANCED VARIABLE REFRIGERANT ADJUSTMENT)

AVRA is an intelligent control technology that dynamically adjusts the refrigerant evaporation temperature based on outdoor ambient temperature and indoor comfort requirements. By simultaneously adjusting the compressor frequency and the electronic expansion valve (EEV) opening, the system can automatically optimise indoor comfort, improve energy efficiency and adapt its performance in real time without requiring any manual intervention.

## CONTROLLER RANGE

### MRV7 S - Wired controllers - Flexible and Easy install

Our new range of controllers features the advanced 1192 non-polarity 2-wire protocol for faster, zero-latency communication and easy installation. They are fully **compatible with both R410A and R32 indoor units** via dual communication ports. In addition to the modern design of the new controllers, they also feature backlight, built-in R32 leak alarm and parameter monitoring for both Indoor and Outdoor units.. The premium models offer a TFT color display with black or white frame options.

## ACCESSORIES

	<p><b>SVP-160A SHUT-OFF VALVE BOX</b></p> <p>Automatic shut-off valve only isolates the circuit zone where a refrigerant leak is detected, while maintaining normal operation across the rest of the system. A single SVP box can support up to 5 indoor units with a maximum total capacity of 18kW.</p>
	<p><b>HDEC-R32A EXTERNAL R32 LEAK DETECTOR</b></p> <p>An external R32 leak detector for MRV7S systems, providing additional protection alongside the built-in detectors in all our indoor units, ensuring safety and compliance.</p>
	<p><b>HA-AA110AD COMMUNICATIONS AMPLIFIER</b></p> <p>The amplifier/repeater boosts and cleans the signal to prevent quality loss over long cables, enabling longer network transmission distances. It supports up to 2 repeaters per system and 30 indoor units. Repeaters extend the signal range for larger setups or distances exceeding 200 meters.</p>

## HAIER SELECTION SOFTWARE

### EASY DESIGN AND CUSTOMISATION

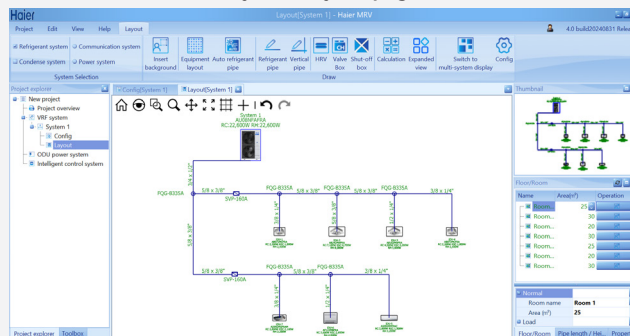

With the Haier MRV Selection software, engineers and consultants can easily design layouts and prepare a full MRV system in a few steps. It selects the right models to meet your building load requirements and calculates the piping schematic automatically or manually, as well as the wiring. It's possible to import DWG and JPG drawings. The selection software guides you within design rules and offers a comprehensive system design report in PDF, Word or Excel format. Haier Selection software **supports R32 and R410A systems**, two technologies combined in a single software.

## SERVICE TOOL TD-03 WITH MONITORING SOFTWARE

Installers and Service technicians can use TD-03 service tool together with monitoring software for real-time monitoring of the system as well as access to operating data of VRF system through the PC. The running data and parameters can be used to analyse errors for fast troubleshooting. In addition, it is possible to save and export the data for further analysis.
