

Haier

More Creation, More Possibilities

Professional, Smart & Healthy Air Solutions Provider

OUR VISION

To be a globally recognised expert in Smart and Healthy Air Solutions.

OUR MISSION

To deliver a complete ecosystem of solutions and services through our innovation in smart technologies. Our mission is to provide our users with the very best in cooling & heating comfort, air quality and efficiencies to create the perfect environment what ever the scenario.

BRAND STORY

Today, in the diverse and unconventional age of the Internet, "one size fits all" products and solutions are not enough to satisfy the customer. Customers want to be treated as autonomous individuals and respected for who they are.

Everyone wants their unique lifestyle acknowledged. That is why we listen carefully to our customers in order to gain a genuine understanding of their lifestyle and requirements. As a global leader, Haier, in addition to innovating its products and solutions, transforms its organisation into a connected platform. In doing so, internal and external resources are connected quickly and easily. We believe only by doing so, we can best meet our customers' expectations in this rapidly evolving world.

Join the Haier network. Create new possibilities.

GLOBAL POSITION

WORLD'S NO.1 **MAJOR APPLIANCES BRAND**

Haier has been accredited with being global No.1 in major household appliances by retail sales from 2008-2024, according to data from Euromonitor.

WORLD'S NO.1 **SMART AC BRAND**

Haier is the world's No.1 connected air conditioner brand, in retail sales 2024, according to data from Euromonitor.

TOP 100 MOST VALUABLE BRANDS

Haier is the world's only IoT Ecosystem Brand that has been ranked in the Kantar BrandZ Top 100 Most Valuable Global Brands for six consecutive years.

TOP 100 GLOBAL CHALLENGERS

With the global landing of the Smart Home ecosystem brand, Haier Smart Home was once again listed on the Fortune Global 500.

"ESG" INTERNATIONAL AWARDS

Haier has received numerous recognitions for its ESG efforts, including the Sustainable Markets Initiative's 2023 Terra Carta Seal.

FORTUNE'S MOST ADMIRED COMPANIES

Haier has been named one of the World's Most Admired Companies by Fortune's, making the sixth consecutive year the Company is on this prestigious list.

GLOBAL NETWORK

Haier currently has 10+ R&D centres, 35 industrial parks, 138 manufacturing centres and 126 marketing centres around the world, reaching out to more than 200 countries and regions and serving 1 billion user households.

Haier has 7 major home appliance brands worldwide: Haier, Casarte, Leader, Hoover, AQUA, Fisher & Paykel, GE Appliances and Candy.

Each of these brands offers the best user experience to various consumer groups in many regions and countries around the world.

HVAC EUROPEAN TRAINING HUB

At Haier we are continually investing in opening facilities for our HVAC professionals to train and experience the Haier portfolio. We have many training centres across Europe supported by our partners. To join our training facility in Venice, in 2022 we celebrated the opening of our new HVAC European training centre in Barcelona. The new training Hub can facilitate a range of training programmes which are tailored to the needs of our professional HVAC network. The Hub has welcomed over 3000+ visitors who have all be able to get close to the brand and the complete ecosystem of solutions we have on offer.

The facilities are fully operational with 3 dedicated rooms, which includes products from our portfolio from Residential, Heating and Commercial solutions, giving visitors a truly hands on experience.

HVAC SOLUTIONS IN EUROPE

HVAC EUROPEAN TRAINING HUB

Haier solutions for renewable energy production and management

Haier has been investing for years in an integrated ecosystem that combines smart applications, renewable energy, and advanced technologies to improve quality of life and reduce environmental impact. The goal is ambitious: to contribute to the realisation of buildings with zero impact by promoting energy efficiency, reduction of CO₂ emissions, and adoption of natural refrigerants and advanced green technologies to fight global warming. Haier commitment to a more sustainable world has been increasingly more evident thanks to the introduction of Haier Energy, the brand-new Haier division dedicated to the manufacturing and distribution of photovoltaic, energy storage, power

conversion system and electric mobility across the European market through specialized distributors and wholesalers. The benefits of utilizing a comprehensive energy management system that encompasses photovoltaic panels, inverters, batteries, heat pump water heaters and ATW systems for domestic hot water, and heat pump air conditioners are significant. This integrated approach allows for seamless control and monitoring of all components through a single application, hOn.

By consolidating these various technologies into one cohesive system, users can optimize energy consumption, enhance efficiency, and reduce

operational costs. Furthermore, the centralized management provided by the hOn app facilitates real-time data analysis and performance tracking, empowering users to make informed decisions regarding their energy usage while contributing to a more sustainable future.

For more scan here

Haier HVAC Solutions boasts a comprehensive portfolio spanning three key sectors: Air Conditioning, Heating and Green Energy. Throughout this portfolio Haier HVAC covers both domestic and commercial solutions but what makes Haier truly unique, is the ability to connect and integrate its range of products to create a one brand solution. Having the ability to do this simplifies all aspects of the supply chain from pre-sales through to after sales support.

The hOn application by Haier can be used to control and manage all Haier products. This gives users complete control over

how they use their energy. The hOn app includes key features such as scheduling the units working time as well as monitoring the energy usage to ensure the system is working to its optimum level.

Haier's one brand solution reinvents the way that domestic and commercial properties consume energy, putting complete control in the hands of the user to ensure all their Haier products are operating in a way that suits the user's lifestyle and environment.

SELECTION SOFTWARE

HAIER SELECTION SOFTWARE

EASY DESIGN AND CUSTOMISATION

With the Haier MRV Selection software, engineers and consultants can easily design layouts and prepare a full MRV system in a few steps. It selects the right models to meet your building load requirements and calculates the piping schematic automatically or manually, as well as the wiring. It's possible to import DWG and JPG drawings. The selection software guides you within design rules and offers a comprehensive system design report in PDF, Word or Excel format. Haier Selection software supports R32 and R410A systems, two technologies combined in a single software.

SERVICE TOOL TD-03 WITH MONITORING SOFTWARE

Installers and Service technicians can use TD-03 service tool together with monitoring software for real-time monitoring of the system as well as access to operating data of VRF system through the PC. The running data and parameters can be used to analyse errors for fast troubleshooting. In addition, it is possible to save and export the data for further analysis.

Integrating Technology with Solutions

Front Discharge with R32 Refrigerant

SPECIFICALLY TAILORED FOR THE EUROPEAN MARKET

The new **R32 MRV7 S** system offers a powerful combination of high energy efficiency, innovative design, and a steadfast commitment to safety and environmental responsibility. This system not only enhances operational performance and simplifies installation procedures but also strengthens leak

protection and significantly increases system flexibility. The MRV7 S is suitable for a diverse array of applications across vertical markets and is available in 4,5 & 6 HP single fan and 8,10 & 12HP double fan both with font discharge.

INTEGRATING DESIGN WITH EFFICIENCY

The introduction of the R32 **MRV7 S** emphasises Haier's dedication to transitioning its MRV range from R410A to R32. This innovative solution positions Haier at the forefront by boosting energy efficiency by up to 17%, implementing advanced safety features to prevent refrigerant leaks, and providing increased flexibility in installation, equipment control, and connectivity.

The **MRV7 S** incorporates a suite of innovative technologies to optimise efficiencies and operational costs. These include a twin rotary compressor, which not only boosts efficiency but also reduces noise. A high efficiency stepless axial fan is engineered to move large volumes of air with minimal power consumption, contributing to sustainability through its robust design.

The MRV7 S boasts a scalable and modular architecture, expertly designed to accommodate the specific needs of each individual project. It offers broad compatibility with a variety of indoor unit types, including wall-mounted, cassette, and ducted units, alongside extended pipe lengths up to 400 meters. This allows for highly adaptable configurations that seamlessly integrate with centralised control systems. From compact spaces to expansive infrastructures, the system guarantees customised comfort, without compromising on performance or efficiency.

INTEGRATING SAFETY WITH PRECISION

The **MRV7 S** is engineered with a multi-zone leak detection system, providing comprehensive safety through built-in leak detectors in all our indoor units. The system incorporates visual and audible alarms within the new controllers. For added flexibility, an optional automatic shut-off valve can be installed, supported by a battery-powered emergency function, which is especially useful during power outages. This feature also allows

for zone segregation, enabling the valve to isolate refrigerant and prevent leaks.

These advanced safety protocols are built-in to proactively manage and reduce risks throughout the product's lifecycle, from its initial design to its day-to-day operation, fully compliant with the new EU regulation 573/2024.

INTEGRATING INSTALLATION AND CONTROL FLEXIBILITY

The **MRV7 S** is designed for streamlined installation and maintenance. It incorporates innovative features like Space-Link technology, a novel protocol that provides installers with unparalleled flexibility in wiring the communications network, moving away from the traditional chain method. This results in simplified wiring, faster installation times, and reduced cabling needs. Furthermore, the integrated self-clean functions for both indoor and outdoor units not only ensure cleaner air quality but also minimize the accumulation of dirt and bacteria, thereby extending maintenance intervals.

To further enhance efficiency, the **MRV7 S** features automatic addressing functionality. This simplifies the commissioning process by automatically assigning unique addresses to each indoor unit, eliminating the need for manual configuration. This is

particularly advantageous for larger VRF systems with numerous indoor units, making both installation and commissioning processes more efficient and user-friendly. The new R32 MRV indoor units are all backward compatible with R410A refrigerant, reducing complexity from logistics to installation.

The new controller has been given a communication protocol upgrade, with a smart interface which is compatible with both R32 and R410A indoor units. Integrated with faster communication and zero-latency operation. Furthermore, the system features **AVRA-AI** for intelligent refrigerant control and advanced communication protocols, allowing for faster installation and more precise system control. Each component is meticulously designed to provide practical, real-world solutions.

NEW R32 NATION OF THE RIGHT OF

INTRODUCING MRV7 S

The New R32 MRV7 S by Haier is the latest generation of VRF systems developed to meet European F-Gas Regulation 573/2024, using low-GWP R32 refrigerant. Specifically designed for the European market, it brings together advanced energy efficiency, cutting edge technology, and a strong commitment to safety and environmental sustainability. This system not only enhances operational performance but also simplifies installation, reinforces leak protection, and ensures adaptability across a multitude of applications including commercial, residential, and hospitality to name a few.

High efficiency DC motor

- DC fan motor with stepless inverter control, from 0 to 91Hz.
- Offering a 17% efficiency improvement over regular DC motors

Axial flow fan

- 640mm axial flow fan
- Reduces the airflow resistance at high speed
- Reduces the noise by 3 dB

Compressor •

- · Low-Noise, High-Efficiency, Twin-Rotary Inverter Compressor.
- Built-in exhaust noise reduction design, reducing compressor airflow noise
- The compressor adopts new vibration-absorbing materials, combined with rubber damping pads, completely isolating the compressor from the housing, reducing compressor rotational noise and vibrations

Electronic control module

- The variable frequency drive control is designed to use high performance vector control without a position sensor. This achieves a control accuracy of up to 0.01rps, thereby making operation more stable, drives higher efficiencies and ensures best capacity management.
- Refrigeration of PCB for optimal performance of electronic system in hot ambient temperatures

Black Fin - coating

- Better corrosion resistance
- Better defrost performance
- Reduces dirt accumulation
- Improves heat exchange, maximising seasonal efficiency

Refrigerant flow path silencer

• Effectively eliminating refrigerant flow noise

Gas-liquid separator

• Equipped with a larger-sized gasliquid separator, it ensures a more reliable system operation.

High efficiency oil separator

• Faster and more efficient separation

MRV7 S - FEATURES

R32 LOW GWP

R32 refrigerant has an Ozone Depletion Potential (ODP) of 0 and a Global Warming Potential (GWP) of 675. This means it has no damaging effect on the ozone layer and boasts a 68% lower GWP compared to R410A. The IEC 60335-2-40 regulation introduces new EU safety standards for R32 VRF systems, presenting new design challenges. The R32 MRV7 S front discharge unit is engineered to comply with these standards as well as minimize its carbon footprint.

SIMPLE INDOOR UNIT (IDU) ADDRESSING

The MRV7 S uses automatic addressing mode to set the IDU and ODU (Outdoor Unit) addresses. If the AC system is powered off, the original address will be retained, this solves the pain point of resetting the address after the power failure.

Two options for addressing the indoor units:

- Use the indoor unit's PCB board dip setting addressing or
- Use wired controller set the indoor unit addressing

EASY INSTALLATION AND MAINTENANCE

"888" test panel: all running data & errors can be checked from the "888" screen. Rotary switch design for easy set up and faster parameter checking.

Total pipe length is up to 300m (single fan), 400m (double fan) for complete installation flexibility.

External static pressure is up to 35Pa (single fan), 45Pa (double fan). Unlike a top discharge unit, you do not require an additional ventilation hood.

The ODU can be directly connected to a centralised control system without the need for Modbus.

SELF CLEAN TECHNOLOGY

Both indoor and outdoor units benefit from Haier's Self Clean functionality without stopping the compressor and distributing the operation of the unit.

The cold expansion technology forms a layer of frost on the evaporator/condenser which

generates a strong force of cold expansion that easily removes dirt from the surface.

The IDU uses the waste heat of the ODU to defrost the heat exchanger, to dry the condensed water, effectively prevent mold breeding.

MRV7 S - FEATURES

BUILT-IN R32 LEAK DETECTION WITH SHUT-OFF VALVE

The system is engineered for safety, which automatically detects refrigerant leaks. Upon detection, it activates visual and audible alarms and immediately isolates the affected areas using an automatic shut-off valve.

ODU SHUT-OFF VALVE

Scenario 1: Outdoor unit directly connected to indoor units (without shut off kit).

SHUT-OFF VALVE BOX (SVP-160A)

Scenario 2: Outdoor unit connects to VRF indoor unit with shut-off valve kit to allow for localised isolation.

SVP160A is an automatic shut-off valve that isolates only the circuitzone where a refrigerant leak is detected, while maintaining normal operation across the rest of the system. A single SVP box can support up to 5 indoor units with a maximum total indoor capacity of 18 kW.

For detailed calculations on Shut-off valve applications and other safety measures compliant with IEC 60335-2-40 regulation, refer to the MRV Selection software.

MRV7 S - FEATURES

DIAMOND SHIELD-R32 SAFETY PROTECTION

- Software: new version of the MRV selection software calculates the amount of refrigerant in the room and alerts if the safety limit is exceeded.
- Alarm: the wired controller, panel and wall-mounted refrigerant detector can trigger a sound and light alarm in the case of a refrigerant leak.
- Battery: SVP160A are equipped with a back-up battery, in order to supply power to close the shut off valves in the event of a system power failure.
- Leak Detectors: Indoor units are equipped with built in leak detectors. There is no need to replace them after detection.
- Recovery: In the case of a leakage, the system can recover the R32 refrigerant to the ODU and will be isolated by the shut off valves (single fan ODU). Unaffected units with SVP160A will continue operation, providing comfortable temperature to the user.
- Shut off valve: the 4/5/6 HP MRV7 S outdoor units are equipped with built-in R32 shut off valves.

For the 8/10/12 HP MRV7 S outdoor units, an optional external shut off valve box (SVP160A) can be installed wherever it is necessary.

INTELLIGENT CONTROL MODE

The intelligent control mode enable quick cooling and heating, which increases the compressor output. The double pressure sensor with PID control technology enables temperature control to ±0.5°C, for optimum indoor air comfort.

IMPROVED EFFICIENCY

AVRA (ADVANCED VARIABLE REFRIGERANT ADJUSTMENT)

AVRA is an intelligent control technology that dynamically adjusts the refrigerant evaporation temperature based on outdoor ambient temperature and indoor comfort requirements. By simultaneously adjusting the compressor frequency and the electronic expansion valve (EEV) opening, the system can automatically optimise indoor comfort, improve energy efficiency and adapt its performance in real time without requiring any manual intervention

MRV7 S - ACCESSORIES

315 mm

435 mm

SVP-160A SHUT-OFF VALVE BOX

Automatic shut-off valve only isolates the circuit zone where a refrigerant leak is detected, while maintaining normal operation across the rest of the system. A single SVP box can support up to 5 indoor units with a maximum total capacity of 18kW.

Name		Parameter
Max. Power / Max. nur	mber of IDU	18kW/5 units
Power supply	Ph/V/Hz	1 / 220 - 240 / 50
Recommended circ	uit breaker	6 A
Liquid connection	diameter	Ø9.52 (3/8)
Liquid connection	diameter	Ø15.88 (5/8)

HDEC-R32A EXTERNAL R32 LEAK DETECTOR

An external R32 leak detector for MRV7 S systems, providing additional protection alongside the built-in detectors in all our indoor units, ensuring safety and compliance.

Name		Parameter
Main	External dimension	110*90*33mm
Specifications	Shell	PC+ABS flame retardant plastic
R32 Range		0~100%xLFL
R32	Resolution	0.1%LFL
Rated supply voltage		24 V
Rated power		2 W
Operating temperature range		-30 ~ 80 °C
Operating humidity range		20~95%

HA-AA110AD COMMUNICATIONS AMPLIFIER

The amplifier/repeater boosts and cleans the signal to prevent quality loss over long cables, enabling longer network transmission distances while keeping the space-link features. It supports up to 2 repeaters per system and 30 indoor units. Repeaters extend the signal range for larger setups or distances exceeding 200 meters, thus making max. space-link communication distance with repeaters of 600m.

Name	Parameter
Dimensions	283*168*74mm
Rated power	AC 220V~240V, 50Hz

MRV S^{TT}

DC Inverter Unit with Front Discharge

MRV S II - FEATURES

IMPROVED CONFIGURATION AND PERFORMANCE (8/10/12HP FRONT DISCHARGE)

Flexible applications with bigger outdoor capacity options.

High efficiency DC fan motor •

• DC fan motor with stepless inverter control, increases efficiency by 45% comparing with AC motor.

Larger fan diameter

- Ø570mm larger axial flow fan
- Zigzag design, reduces disturbance in airflow as well as increasing air volume and reducing noise level.

High efficiency condenser .

- Newly designed high efficiency inner grooved tube.
- New hydrophilic corrugated fissurefin increases efficiency.

Vector inverter control

- 180 degrees sine wave vector control, 64-bit operation
- Precision control achieves high efficiency and lower noise levels

Double pressure sensor

- Equipped with high and low voltage pressure sensors
- Accurate pressure control ensures the system runs smoothly, increasing energy efficiency.

Twin rotary DC Inverter compressor

- High chamber DC inverter twin rotary compressor
- Increased energy efficiency by achieving smaller vibrations and benefiting from lower sound levels.

LEADING TECHNOLOGY (4-6HP)

Two-stage super cooling cycle technology, increases efficiency by 9%. (Double fan) 30°C maximum temperature in cooling increases unit refrigerating capacity by 46%

INCREASING POWERFUL HEATING CAPACITY

When the ambient temperature is low, the heat exchange capability of the outdoor unit is decreased and the amount of air returned by the compressor is reduced. By increasing the refrigerant flow during the heating cycle of the indoor unit heat exchanger, we improve the heating capacity.

MRV S II - FEATURES

HIGH EER AND COP(8/10/12HP)

DC FAN AND FAN MOTOR

- DC inverter fan motor is highly efficient during part load operation
- 16-stage speed control; high efficiency operation especially in low speed

- •45% increase in efficiency compared with AC motor due to reduced input power
- •570mm diameter fan, increases air flow and achieves higher efficiency(8/10/12HP)

SELF-CLEANING FUNCTION ON INDOOR AND OUTDOOR UNITS

During operation, dirt accumulates on the evaporator. If the evaporator is not cleaned regularly, accumulated dirt reduces the thermal exchange by 15-30% and also promotes the proliferation of bacteria and mould.

The new Self Clean technology is the first of its kind to integrate the self-cleaning function of both the evaporator and the condenser. It starts with cleaning the evaporator, then switches to cleaning the condenser without stopping the compressor.

LOW NOISE LEVEL

- •Night quiet operation function
- •Noise levels can be reduced down to 45dB(A)

NEW DC INVERTER TWIN ROTARY COMPRESSOR

- •A small torque change and a good dynamic balance of the system allows the unit to runs smoothly with little vibration, low noise levels and increased efficiency
- •Increased efficiency during part load operation

MRV S II - FEATURES

- New aerodynamic fan 550mm super big diameter aerospace helix fan. lowering sound level by 3dB(A)
- Enlarged air inlet path and spiral air outlet path. Air flow direction follows the grill direction which reduces sound levels by 2-4 dB(A)
- Automatic sound reduction capability. Night mode set by the PCB is 8dB(A) lower

LOW SOUND OPERATION

- •DC inverter compressor achieves a smoother operation and effectively reduces sound levels by eliminating the frequent start up of the compressor.
- •Precision control achieved by vector inverter control
- •Non-resonance motor brackets are used on the DC fan motor which ensures a smoother operation of the motor and reduces operating sound levels
- •Larger fan diameter inspired by aviation design principles for quieter operation

COMPACT FRONT DISCHARGE DESIGN

Front discharge design eliminates the need for additional ventilation hood compared with a top discharge unit, ideal for narrow spaces.

MRV S II - FEATURES

LONG PIPE LENGTH, INCREASED HEIGHT DROP

- •Total pipe length: 300m
- •Single pipe length: Max.175m
- •From outdoor to the first branch pipe: 135m
- •From the first branch to the furthest indoor door unit: 40m
- •Height drop: 50m(outdoor above)/40m (outdoor below)
- •Height drop between indoor units: 15m

PARAMETER DISPLAY PANEL

The parameter display panel has been improved by moving it to the side of the unit.

The parameter can be easily accessed by directly opening the protective cover for maintenance.

AUTOMATIC REFRIGERANT RECLAIM TECHNOLOGY

Set automatic refrigerant reclaim through the dip switch. The refrigerant in the indoor unit can be automatically returned to the outdoor unit. This is convenient during maintenance, reducing refrigerant waste, maintenance cost and time.

REFRIGERANT CONTROL TECHNOLOGY

Refrigerant control technology without high pressure accumulator, reduces the refrigerant volume and enhances operating efficiency.

HIGH AND LOW DOUBLE PRESSURE SENSOR

- Double pressure sensor with PID control technology.
- Combining high speed communication to quick start the compressor with more precise control the temperature can be controlled with a precision of ± 0.5 °C.

Heat Pump VRF Continuous Heating System

MRV 5-H CONTINUOUS HEATING, EVEN DURING DEFROST MODE.

MRV 5-H continuous heating VRF system by Haier adopts intelligent defrost technology according to the system pressure, coil temperature and humidity changes, coupled with the fan motor inspection technology to initiate automatic defrost mode.

Indoor temperature fluctuations are reduced by using direct defrosting technology and ensuring that in certain defrosting modes the four-way valve does not reverse direction giving you uninterrupted heating temperatures.

ENHANCED VAPOR INJECTION TECHNOLOGY, LOW TEMPERATURE HEATING AND HIGH TEMPERATURE COOLING

The MRV 5-H unit adopts an EVI compressor, which can increase the circulation of the refrigerant by 15%, and improve the heating effect by 30% compared with standard compressor types. The heating operating temperature in winter can be -27° C, and the cooling operating temperature in summer can be 52° C.

2 STAGE SUB-COOLING

Sub-cooling degree is up to 30°C. improves the cooling and heating capacity.

RELIABLE PERFORMANCE IN LOW TEMPERATURES

Compared with the standard series, the heating capacity in MRV 5-H is increased by 10% in the low temperature. For example, in the 8HP unit the heating capacity is 100% under $-10^{\circ}C$ environment temperature.

WIDE RANGE OF POWER

Up to 26 HP with single module and up to 104 HP by combining up to 4 modules. Modules 8 to 16 HP are equipped with single fan, for maximum installation flexibility and a small footprint on the surface.

SMART LINK

Wireless connection and communication between indoor units.

- Labour saving
- Automatic network connection
- Convenient maintenance
- Stable performance
- Total Cost saving is estimated about 30%

TOTAL PIPE LENGTH 1000M, HEIGHT DROP 110M

- Max. total pipe length 1000m
- Max. actual pipe length 220m
- Max. equivalent pipe length 260m
- Max. drop between IDU&ODU / 90m (outdoor unit up) / 110m (outdoor unit down)
- Max. drop between IDU&IDU 30m*

		Max. Length	Pipe in left figure
Single way total pipe length (=	total liquid pipe length)	1000m	L1+L2+L3+L4+L5+L6+L7+L8 + L9+L10+L11+L12+L13+L14+L15
Single way max. pipe length (n	nax. length between outdoor & indoor) actual length	220m	L1 + L3 + L5 + L7 + L14 + L13
Main pipe actual length (length	between first gather pipe & first branch pipe)	130m	L5
Pipe length after first branch p	ipe (length between first branch & farthest indoor)	90m	L7+L13+L14
The distance between the nea	rest indoor unit and the farthest indoor	40m	L13+L14-L12
Pipe length among outdoor ur	nits (length between first gather pipe & farthest outdoor unit)	10m	L1+L3
Height difference between inc	loors	18	h2
Height difference between ou	tdoors	5m	h1
Height difference	Indoor below outdoor (between highest outdoor & lowest indoor)	50m	H1
between indoor & outdoor	Indoor above outdoor (between lowest outdoor & highest indoor)	40m	H2

st if the total pipe length is between 300m and 1100m or the drop between IDU and ODU more than 50m, please contact your local dealer.

DESIGN OF CONTROL CONDENSER WITH ELECTRONIC EXPANSION VALVE

The condenser is controlled by two electronic expansion valves, which can reasonably use the heat exchanger area according to the demand of IDU heat exchange temperature and distribute the refrigerant flow according to the load demand, to ensure high-performance heat exchange efficiency.

SUPER EFFICIENCY WITH FULL DC INVERTER COMPRESSOR

Matches up inverter with stepless compressor, the durability and stability of the compressor are guaranteed, fault can be reduced.

Each compressor has an inbuilt oil temperature sensor and a discharge temperature sensor, detecting the discharge temperature and oil temperature of compressor, which in coordination with the compressor frequency and the EEV control, to ensure exhaust heat and oil temperature superheat kept within the optimal range. Ensure that the oil dilution is maintained at a safe level at all times.

AUTOMATIC OIL BALANCING

When pairing multiple modules with each other, it is not necessary to provide the oil equalisation pipe, as the lubrication system inside each module is self-controlled.

4-SIDED CONTINUOUS HEAT EXCHANGER COIL

The outdoor unit adopts a 4-sided continuous heat exchanger coil design, increasing the heat exchange area and airflow efficiency. This results in up to 30% higher heat exchange efficiency compared to conventional 3-sided designs. The system works with a high-efficiency variable-speed DC motor and stepless fan frequency control (0–91 Hz) for optimized performance and reduced energy consumption.

CERTIFIED AND REGISTERED DESIGN

The unit is equipped with a hinged technical door that allows access to the electronic parts in a simple and secure way. The electronic part in turn is mounted on a mobile base that can also be opened for access to the refrigeration part of the unit. This line of products includes new and generous fans with an aerodynamic profile tested in the wind tunnel, with a diameter of 700 mm to move large air flows in maximum tranquillity and quietness.

TEMPERATURE APPROACHING TECHNOLOGY

The main problem of an ordinary inverter VRF system lies in that its compressor starts and stops frequently. stopping when the room temperature reaches the setting temperature and restarting when the same becomes higher than the setting temperature. Though the inverter technology has improved such a problem greatly. the energy consumption caused by system restart is still a problem that cannot be ignored. Haier MRV 5 series units adopts the temperature approaching technology, which enables the VRF system to maintain a low-frequency operating state all the time when the room temperature is close to the setting temperature but doesn't reach the setting temperature, thus avoiding the energy waste caused by frequent on/off.

WIDE OPERATION TEMPERATURE

The heating operation temperature can be as low as -23°C outdoor ambient temperature. The cooling operation temperature can reach 50°C outdoor temperature, allowing it to operate in extreme temperatures.

PRECISE TEMPERATURE CONTROL AT ±0.5°C

With twin pressure sensors and twin EEVS, the refrigerant volume can be adjusted automatically to realise precise temperature control, improving indoor comfort.

INTELLIGENT TRIPLE BACKUP OPERATION TECHNOLOGY

- For the double-compressor system, if one compressor is in breakdown, the other compressor can be put into backup operation immediately to ensure the user needs.
- For the multi-module combination, in case of breakdown of one outdoor unit, this unit can be interrupted from the system so that the other modules can continue to operate.
- · Super-long backup operation time, which can reach up to 8 hours.

MULTIPLE MODES AVAILABLE TO MEET THE NEEDS OF DIFFERENT USERS

Operation mode:

Cooling priority, heating priority, cooling only, heating only, and VIP priority

Silent mode:

Seven-position silent mode available (night time silent mode and six-position silent mode)

Static pressure mode:

No static pressure mode, low static pressure mode, medium static pressure mode, and high static pressure mode

ROTARY ELECTRIC CONTROL BOX DESIGN

Rotary electric control box design gives access to the inside of the machine without having to dismantle the whole casing, for faster and more convenient maintenance.

AUTOMATIC SNOW CLEARING AND DUST REMOVAL FUNCTION

According to the ash accumulation on the outdoor heat exchanger, the unit will blow away the dust, according to the reverse operation of the fan.

4-WAY PIPE CONNECTION

You can freely choose the front, back, left side, right side of the unit to connect the pipe, easy for install and design.

PIPING REFRIGERANT STORAGE TECHNOLOGY

Advanced refrigerant control technology, the refrigerant is stored in the indoor and outdoor machine piping, remove the high pressure tank, less refrigerant filling in unit, high efficiency.

AUTO ADDRESSING INDOOR UNITS

The ODU can automatically address the indoor units through the module on PCB, and the controller can search and set the address of the indoor unit, making the setup and maintenance of the system quick and easy.

110PA EXTERNAL STATIC PRESSURE DESIGN

The static pressure of the air outlet is up to 110Pa, which can meet the cooling effect of the layered arrangement of the outdoor unit.

Installation of duct

The outdoor unit is hidden inside the building without affecting the overall image of the building

SMARTLINK - WIRELESS WI-FI COMMUNICATION

Wi-Fi "Smartlink", the new and exclusive wireless communication system between outdoor and indoor units (optional)

"SMARTLINK" WI-FI FEATURES

- As an alternative to the classic digital communication cable, which is required to make all indoor units talk to their outdoor units, you can install these wireless radio accessories with ZigBee technology on each indoor and outdoor unit.
- At the time of activation, the indoor units begin to dialog with each other creating a stable network of coded signals that bounce between the various internal units until they reach the outdoor unit and vice versa. Each indoor unit works as a signal repeater. With this system, communication is guaranteed even to the most distant indoor unit, and in the presence of walls or other obstacles.
- When an indoor unit is in maintenance, the signal of the unit is lost, this does not affect the normal functioning of the
- The system is set up by the Haier service centres in the startup phase through a special application (APP) that can be installed on smartphones or tablets (it does not require access to the Internet, as it works on a local WIFI network)

Radio adapter for the indoor unit to be connected to the respective electronic board.

The use of the 'Smartlink' system is useful where it is impossible to reach all the units with a cable. It can be expensive in economic terms and takes time to roll out a cable, intervening on an existing redevelopment plant where the existing layout of the wired communication is not known and where there was a problem on the existing cable (damage etc.) and it is not possible to detect the problem.

Full DC Inverter 3-Pipe Heat Recovery Systems

Simultaneous heating and cooling available with a 3-pipe heat recovery outdoor unit

Various modes of simultaneous operation

EXAMPLE OF A 3-PIPE MRV 5-RC SYSTEM

NEW SELECTION VALVES

Reduced clutter

NEW SELECTION VALVES

- Specially designed for MRV 5-RC, volume is small to 0,02m3 (for VP1 box), 0,05m3 (for VP4 box).
- Extensively reduces installation space.
- Individual Valve and Pipe Box for Heat Recovery.
- · The valve box can be connected in a series which reduces the use of diverging pipes and reduces the installation cost.

Model*	Maximum connectable capacity (kW)	Power supply	Maximum number of connectable indoor units, same mode of operation	Dimensions (mm)
VP1-112C	x ≤ 11,2	220-240V single-phase - 50/60Hz	5	388x200x277
VP1-180C	11,2 < x ≤ 18,0	220-240V single-phase - 50/60Hz	8	388x200x277
VP1-280C	18,0 < x ≤ 28,0	220-240V single-phase - 50/60Hz	8	388x200x277
VP4-450C	4 ways - max 11,2kW for single output.	220-240V single-phase - 50/60Hz	20	405x300x421

^{* (}limit determined by the diameters of the input pipes of the valve boxes)

MRVW

Heat Pump System Full DC Inverter Water Cooled

Haier

MRV-W - FEATURES

OPERATING PRINCIPLE

MRV-W are MRV/VRF systems with direct refrigerant expansion and inverter compressors that use the same indoor units as the classic MRV systems, controls and joints.

The design and implementation of the internal circuit follows the same rules as a normal MRV/VRF system, the only difference is that they use water and not air to condense or evaporate on the outdoor unit. MRV-W therefore does not have fans and large air/refrigerant exchangers but uses special water/refrigerant exchangers. This allows to significantly reduce the size of the product compared to a classic MRV of equal cooling capacity.

Thanks to its small footprint, of only W 775 \times D 545 \times H 995, the installation of the MRV-W takes place inside technical rooms, basements, garages and corridors as it does not need to exchange energy with the outdoor air.

The water needed for operation reaches the units through small diameter pipes. Water can have different origins such as ground water, lake, sea, river, end industrial processes, accumulation of non-drinking water.

CONFIGURATION

MRW-W is a direct expansion system that combines the efficiency of the VRF technology with the use of water from a variety of sources.

EXAMPLE OF COOLING OPERATION

EXAMPLE OF HEATING OPERATION

Haier

MRV-W-FEATURES

MRV-W INTERNAL STRUCTURE

HIGH EFFICIENCY

Using a constant source, the COP can also reach values of 6.02, much higher than an air/air system. As a result, EER values are also increased in equal proportion.

HIGH-EFFICIENCY COMPRESSOR

DC Inverter Scroll

COUNTER CURRENT "PIPE IN PIPE" EXCHANGER

Water circulates inside and refrigerant circulates outside. The internal star-section and spiral tube offers a greater exchange surface than a classic circular section, for the benefit of efficiency.

DUAL ELECTRONIC EXPANSION VALVE

To modulate the surface of the active exchanger according to the thermal demand.

2-SIDED SUB-COOLING SYSTEM

- The first stage acts on the condenser
- The second stage acts independently
- The independent or joint activity of the two stages allows to increase the exchange of refrigerant by 46% and to reduce the loss of load through the pipes by 55%, leading to an increase in overall efficiency of 9% compared to single circuits "Under cooling"

Haier

MRV-W - FEATURES

COOLING ELECTRONIC CIRCUITS

The circuits are cooled by special static exchangers where the refrigerant gas circulates inside. This allows you to cool and keep the temperature of the electric panel and power modules constant, avoiding cumbersome sinks and especially the use of noisy electric fans.

RELIABILITY

The management of the external pump or electro-valves to power the flow of water to the MRV-W systems, is controlled by the unit itself according to the activity of the compressor and the real need for water. Avoiding unnecessary waste of energy.

TEMPERATURE RANGE

CONSTANT PRESSURE

Accurate system to maintain the pressure adequate to the compressor according to the operating temperature of the refrigerant in order to maintain a more stable output capacity and for the reliability over time of the component itself.

FLEXIBLE INSTALLATION

Using water as a condenser, you can air-condition very tall buildings, where you can reach up to 200 meters in height with a pressure of 1.6 MPa.

POSSIBLE ENVIRONMENTS WHERE MRV-W CAN BE INSTALLED INDOOR

MRV-W - FEATURES

EXAMPLES OF PIPING LENGTHS

Ability to achieve large elevations and lengths within each floor served by an MRV-W.

AS**2MNERAC External EEV

*Until stocks last.

Optional controller HW-BA101ABT

Optional controller HW-SA201ABK

Controller YR-HQS01

R410A Units are compatible with R32 wired controllers*

- · Compact, linear design with dimmable information display
- DC inverter fan motor
- External EEV (Optional)
- 5 fan speeds selectable with wired controller

The external EEV modulation valve must be installed in the liquid pipe, between 2m and 5m from the unit. This allows to move this sound source out of the room, reaching high levels of silence for the perfect confort in hotels, commerces or offices.

Optional remote control YR-HQS01

- Double air delivery, upper and lower.
 In heating mode: both outputs are enabled, to spread hot air at floor level preventing the "cold feet" effect typical of only higher deliveries.
 By acting on the on-board selector it is possible to inhibit the lower output in heating mode.
 In cooling mode: The unit works only with the top delivery, the lower output automatically closes.
- Compact and elegant design
- Silent operation
- DC inverter fan motor
- 5 fan speeds selectable with wired controller

Haier

MRV SLIM DUCTED HEALTH FEATURES

Healthier air flow

Mold and bacteria are unable to grow on the components where air flows through, with help from silver ions, which bring no harm to human health. This process means the unit always produces clean and healthy air.

UVC sterilisation

The built-in UVC sterilisation function emits UV light to sterilise the air passing through with an efficiency of 99.998%.

Antibacterial filter

Silver (Ag) is a natural antibacterial material, which has a broad-spectrum of antibacterial properties which help to kill bacterial.

Haier's antibacterial filter has added silver ions and antibacterial organics to kill Escherichia coli & Staphylococcus aureus effectively, with long lasting effects.

Self-clean function

During operation, dirt accumulates on the evaporator. If the evaporator is not cleaned regularly, accumulated dirt reduces the thermal exchange by 15-30% and also promotes the proliferation of bacteria and mould.

Self Clean technology is the first of its kind to integrate the self-cleaning function of both the evaporator and the condenser. It starts with cleaning the evaporator, then switches to cleaning the condenser without stopping the compressor.

Cold expansion technology

Express washing technology Antibacterial technology

The layer of frost that forms on the evaporator/condenser generates a strong force of cold expansion that easily removes dirt from the surface.

Low-angle hydrophilic aluminium foil speeds up water drainage by 20%.

The coating contains silver nanoparticles capable of effectively killing 99% of the bacteria by inhibiting their proliferation.

Optional remote control YR-HQS01

R410A Units are compatible with R32 wired controllers*

- Ideal for bedrooms, hotel rooms and quiet environments
- Extremely thin, only 185 mm
- Ready for fresh air input (pre-cut)
- Standard condensate drain pump
- Intake of lower or rear air by moving the panel as standard
- · Silent operation
- Incorporates standard UVC ray generator to sterilize the air that flows through the unit
- Designed for free-mount installation without duct, with a standard prevalence of 0 PA. You can increase static pressure to 15 or 30 PA
- Possibility of optional functional aesthetic control kit panel
- DC inverter fan motor
- 5 fan speeds selectable with wired controller
- Rear or bottom air return

Suitable for use in R410A Systems

Optional controller HW-BA316AFK

Optional controller HW-SA301AFK

Optional controller HW-PB101AFK

Optional controller YR-HQS01

- Ideal for bedrooms, hotel rooms and quiet environments
- Extremely thin, only 198 mm
- · Ready for fresh air input (pre-cut)
- Standard condensate drain pump
- Intake of lower or rear air by moving the panel as standard
- · Silent operation
- Selectable static pressure of 0 Pa or 40 Pa

- · Possibility of optional functional aesthetic control kit panel
- DC inverter fan motor
- 7 fan speeds selectable with wired controller
- Rear or bottom air return
- External EEV (Optional)
- · Vertical / Horizontal installation Available

AD482MJERAF AD722MTERAF AD962MTERAF

Optional controller HW-SA201ABK

Optional remote control YR-HQS01

R410A Units are compatible with R32 wired controllers*

- Selectable ESP
- Speed Selection (16 speed for AD722/962MTERAF and 10 speed for AD482MFERAF)
- Can be installed together with other indoor units on the same refrigerating circuit, to pre-treat the outdoor air before sending it to indoor units or in the environment
- Take note that the nominal potential in heating is always lower than that of cooling
- Integrated flow switch
- DC inverter fan motor

The inbuilt UV-C ray emitter module performs an effective and efficient air sterilization both on the unit's coil surface and the air that passes through. This module's performance has been certified by the independent laboratory Texcell.

Optional controller HW-BA101ABT

Optional controller HW-SA201ABK

Optional remote control YR-HQS01

R410A Units are compatible with R32 wired controllers*

- Compact Ducted Med-High Pressure
- Static pressure fan 20 / 200 Pa.
- The standard static pressure is 20 Pa.
- Selectable ESP from 20 Pa to 200 Pa by using a wired controller
- Standard condensate drain pump
- Incorporates standard UVC ray generator to sterilize the air that flows through the unit
- Only 248mm Height

Haier

MRV HYDROBOX – FEATURES

LOW OPERATING COST

By using free renewable energy from the outside air as heat source, it is more energy efficient and environmentally friendlier than oil and gas boilers. The operating cost is low due to high efficiency heat pump and heat recovery technology.

COMFORT

The hydro box unit has a heating capacity of up to 28kW per module which can be used in combination for larger systems. The leaving water temperature ranges from 5°C to 55°C, this provides desirable climate comfort to users. Connectible to MRV 5-H, MRV 5-RC and MRV SII.

MRV HYDROBOX – FEATURES

MULTIPLE HEATING AND COOLING SOLUTIONS CAN BE SELECTED TO PROVIDE:

1. ATA (AIR-TO-AIR) AND ATW (AIR-TO-WATER)

In the summer, ATA cooling and DHW (Domestic hot water) can be used. The heat pump outdoor and hydro unit can provide hot water to heat up water stored in the DHW tank when the MRV indoor units is not operating. The outdoor heat recovery can supply cooling and the hydro unit can provide a hot water supply at the same time.

In winter, ATA heating or hot water heating can be selected to warm the rooms, and DHW can still be heated up at the same time.

2. ONLY ATW (AIR-TO-WATER)

In summer, the outdoor heat pump and hydro unit can provide hot water to heat up water stored in the DHW tank when the fan coils or AHU cooling is not operated. In spring and autumn the outdoor heat recovery and hydro unit can provide hot water when the fan coils or AHU cooling is operating.

In winter, fan coils provide heating to warm the rooms, while the DHW is heated up at the same time.

EASY MRV

Flexible, high-efficiency MRV systems

MS valves for connecting residential and commercial units

EASY MRV - FEATURES

EASY MRV SYSTEMS

Haier's "Easy MRV" system is the ideal solution for environments where an exceptionally low sound level is required by the indoor air conditioning unit.

Thanks to the external remote thermal expansion valves (MS valve box) it is possible to connect to our Supermatch indoor residential units. Which as standard are not equipped with a valve and ensure very low operating sound levels, to the MRV outdoor units (with some types of indoor units, you can reach 16 dBA). In addition, if you are looking for internal wall units with a modern and different design, with high class functionality and features, our FLEXIS and PEARL series connected to an "Easy MRV" system will meet your requirements.

CONNECTIONS

Haier's valve boxes have built-in gas pipes to facilitate installation without requiring welds due to utilising a flare connection.

For more information please refer to the Haier Residential and light commercial catalogue

MRV AHU

Applications

MRV AHU (1) INTRODUCTION & BENEFITS

APPLICATIONS

Regulations require adequate air renewal in the premises according to the activity carried out inside the building. Thanks to the interface kit between high efficiency MRV units and direct expansion air treatment units, Haier is able to meet the needs for air renewal and treatment.

GENERIC CONNECTION SCHEME

Haier

CONNECTABLE OUTDOOR UNITS

CONTENTS OF THE AHU KIT

CONTROL AND MANAGEMENT SYSTEMS

A Haier MRV-AHU system is comparable to a classic VRF system, therefore it can be inserted in a group control context.

Example

SIMPLE INSTALLATION

Compared to a traditional water system, Haier's AHU-MRV direct-expansion technology minimises plant components. No cooling towers, large water pipes or pumps are needed. In addition, the efficiency of MRV/VRF/VRV systems is notoriously higher than traditional air/water systems. Haier AHU-MRV systems can be independently or centrally controlled thanks to Haier's multiple solutions for product control and management. It is also possible to power MRV and AHU indoor units within the same plant.

Haier

CHARACTERISTICS AND FUNCTIONS

- · Ability to control third-party AHU
- Compatible with MRV 5-series outdoor units and MRV SII series" (4-12 HP)
- A single box covers a power range of 3,5 to 73,0 kW. Can to connect up to 3 boxes in parallel for large capacity.
- Expansion valve and paired electronic boards, with separation possibilities for greater flexibility during installation.
- Managing 0-10 V DDC inbound signal from third-party controller
- Temperature signal control provided by a DDC control or return from the Haier sensor
- Remote contact input to select Hot/Cold mode
- Clean contact input for managing 3 ventilation speeds
- Status signal output "Defrost / Defrost"

ADVANTAGES

AH1-070B AH1-140B

AH1-280B

Valve capacity	Possibility to control AHU with power values from 3 to 73 kW with a single valve
High compatibility	The same electronic boards as the MRV indoor units for simple management and maintenance
Reliability	The expansion valve is produced by FUJIKOKI, the Japanese leader in this sector.

Control method "A"

The third-party control system generates a signal ranging from $0-10\,\mathrm{V}$ to represent the required power demand. Haier's AHU Kit uses this input signal to adjust the power delivered by the MRV unit to meet the real need for thermal air treatment.

Liquid/Gas refrigerant pipes, only the liquid pipe enters the valve box and then continues to the direct expansion coil. The Gas pipe goes directly from the outdoor unit to the coil inside the AHU.

Note:

If the third-party DDC controller generates only the 0-10 V demand indicator signal, the Haier wired controller is necessary to handle the following signals: Hot/cold operating mode, switching AHU on/off, alarms.

If the DDC controller generates all the necessary signals, the Haier controller is not required.

Control method "B"

The temperature is controlled by the third-party DDC, which sends the 0-10 V modulating signal to the Haier kit that will control the temperature set point.

Liquid/Gas refrigerant pipes, only the liquid pipe enters the valve box and then continues to the direct expansion coil. The Gas pipe goes directly from the outdoor unit to the coil inside the AHU.

Note:

If the third-party DDC controller only generates the $0-10\,\mathrm{V}$ signal corresponding to the required temperature set point, the Haier wired controller is necessary to handle the following signals: Hot/cold operating mode, switching AHU on/off, alarms. If the DDC controller generates all the necessary signals, the Haier controller is not required.

Control method "C", special applications

Configuring the system WITHOUT a third-party DDC. In this case, the Haier controller is necessary to make all the settings. This system requires the installation of an on/off thermostat that switches on or off the AHU when the temperature set point is reached. This "C" method is used to continuously heat or cool in an on/off manner, without modulation and therefore with less comfort in the environments.

Control method "D"

MRV and AHU mixed air conditioning system work in the same cooling circuit with MRV Haier and third-party AHU indoor unit. In this case Haier controller is required.

 $\label{liquid} Liquid/Gas\ refrigerant\ pipes, only\ the\ liquid\ pipe\ enters\ the\ valve\ box\ and\ then\ continues\ to\ the\ direct\ expansion\ coil.$ The Gas\ pipe\ goes\ directly\ from\ the\ outdoor\ unit\ to\ the\ coil\ inside\ the\ AHU.

Control & Management **Systems**

SIMPLE AND INTUITIVE SOLUTIONS TO MANAGE PLANTS

A SINGLE INTEGRATED SYSTEM

Haier's communication protocol is unique to MRV systems and the residential and commercial products of the Supermatch line. This allows the same controls to be used for both small and large MRV plants.

MANAGEMENT AND SUPERVISION

 $Haier\ provides\ reliable\ and\ professional\ supervision\ systems\ for\ better\ management\ of\ preventive\ maintenance\ as\ well.$

"SMART" CONTROLS

Systems that can be customised to meet your needs.

CENTRALISED CONTROL

The centralised controls provide a customised control of the entire system from a single point. Manage individual units, groups, or zones and define different settings for each of them.

HC-SA164DBT

- Possibility to control via WEB/Internet by means of optional Wi-Fi module HI-WA164DBI
- · Intelligent system for plants up to 64 indoor units
- · 5" LCD TFT full touchscreen display backlit
- · Built-in weekly timer
- · Possibility of naming units and groups
- Displaying alarms
- Requires HA-MA164AD except when connected directly to MRV5 versions or MRV S II (AU**NFKERA) - for details see following pages
- 32 independent cooling circuits, each with their own HA-MA164AD converter
- Ability to simultaneously control MRV units and Split units Supermatch / Residential.
- · MODBUS output as standard

YCZ-A004

- Smart system for medium size plants up to 256 indoor units
- Large 7" LCD TFT full touchscreen display
- Built-in weekly timer
- Possibility of naming units and groups
- Displaying alarms
- Requires HA-MA164AD except when connected directly to MRV5 versions or MRV S II (AU**NFKERA) for details see following pages
- 32 independent cooling circuits, each with their own HA-MA164AD converter
- You cannot control MRV units and Supermatch/Residential with the same controller
- MODBUS output as standard

HC-LA1CDBT

- 12.5-inch TFT LCD touch screen
- Max. 800 MRV indoor units and Max. 128 LCAC IDUs connectable for one controller (totally 928) IDUS connectable
- Floor plan layout view
- Web Access and Email Alarm
- Weekly Schedule and Special day setting
- Integrate 3rd party devices like fire alarm, lighting with Haier indoor units All MRV system requires the gateway HA-MA1ADB(one system requires one gateway)
- LCAC products requires PCB adapter YCJ-A002(One IDU requires one YCJ-A002)
- Total electricity consumption display and consumption distribution for tenant billing (the amp meter would need to be connected to HA-MA1ADB)
- Data curve

HA-MA164AD

- Haier protocol converter to RS-485
- To be connected to centralised systems (not required for series 5 outdoor units)
- Each cooling circuit needs 1 converter
- 1 converter can handle max 64 internal units on single cooling circuit
- This accessory, if NOT connected to a centralised controller as a dedicated converter, can be used individually to transform the communication protocol "Homebus Haier" into "MODBUS". (For this feature, configure the selectors in the desired mode)

HA-MA1ADB

- Interface: Modbus
- Match with 12,5-inch webserver central controller HC-LA1CDBT
- Max. 128 indoor units connectable
- Digital tube display Indoor quantity, gateway address, time and date
- · Electricity data collection, calculation, distribution and storage

HI-WA164DBI (WI-FI MODULE)

This module, connected to an Internet access with Wi-Fi, allows remote control via dedicated APP on tablets and smartphones (no PC).

Each Wi-Fi module can control up to 64 indoor units.

Through the APP, the same functionality as the centraliser, connected to the MRV system, is replicated and managed.

- Control functions, on/off, temperature setting, timer settings, weekly, fan speed.
- Alarm monitoring function, errors, error history.
- User account management, including account registration, password change and account information modification via APP.
- Convenient sharing of the management authority. The primary account can share the management of the primary account with the secondary accounts, without re-registering the units.
- Each individual APP can handle up to 256 indoor units.
- Example: 4 Wi-Fi modules with 64 Interior each, or 7 Wi-Fi modules with 36 interiors each
- $If a \ HC-SA164DBT \ centralised \ controller \ is used \ directly, the \ Wi-Fi \ module \ can \ be \ connected \ directly \ to \ the \ centraliser \ on \ a \ dedicated \ terminal \ dedicated \ d$
- The Wi-Fi module can be connected directly to the MRV series 5 outdoor units, or to the HA-MA164AD converter if the outdoor units are NOT series 5.

With this configuration it is possible to control the MRV system even without local centralised controllers, using only the APP installed on tablet or smartphone, by ensuring stable and fast Wi-Fi coverage to the module

If used independently (not connected to a centrallized controller) it is necessary to provide 12 DC electric supply (not provided by Haier)

Haier

CONTROL AND MANAGEMENT SYSTEMS Features

HC-SA164DBT

- $\bullet \ {\hbox{Control}} \ \hbox{of the operating mode, temperature, ventilation,}$
- Error control and alarm memory

- Daily and weekly programming for single unit $\bullet \ \mathsf{Free} \ \mathsf{and} \ \mathsf{independent} \ \mathsf{programming}$

• Monitoring the status of each individual unit

HA-MA1ADB

HC-LA1CDBT

YCZ-A004

Monitoring and control

- · Control of up to 256 indoor units
- Control of the operating mode, temperature, ventilation,
- Icons displayed similar to those on remote commands

Power-saving function

- · User function locking mode
- Defining lower and upper limits for desired temperature selection

Zone management

• Defining zones as per user requests

Timer programmer

- Daily and weekly programming for single unit
- · Free and independent programming

WI-FI FEATURES

This module, connected to an Internet access with Wi-Fi, allows remote control via dedicated APP on tablets and smartphones (no PC). Each Wi-Fi module can control up to a maximum of 64 indoor units, which is the limit of the centraliser. Through the APP, the same functionality as the centraliser, connected to the MRV system, is replicated and managed.

SPECIFICATIONS

- It is connected to the centraliser through the cable supplied, from which it is powered.
- It can be connected up to 100 meters from the centraliser, so as to reach an area covered by Wi-Fi
- Control functions, on/off, temperature setting, timer settings, weekly, fan speed.
- · Alarm monitoring function, errors, error history.
- User account management, including account registration, password change and account information modification via APP.
- Convenient sharing of the management authority. The primary account can share the management of the primary account with the secondary accounts, without re-registering the units.
- Each individual APP can handle up to 256 indoor units. Example: 4 Wi-Fi modules with 64 Interior each, or 7 Wi-Fi modules with 36 interiors each
- The Wi-Fi module can be connected directly to the MRV series 5 outdoor units, or to the HA-MA164AD
 converter if the outdoor units are NOT series 5. With this system you can control the MRV system
 even without a centraliser installed, but through the APP alone by ensuring adequate Wi-Fi coverage to the module.
- The APP is available for Android and iOS.

WI-FI MODULE HI-WA164DBI

HAIER SMART AIR 2

HI-WA164DBI WI-FI MODULE FOR CENTRALISED CONTROLLER HC-SA164DBT

CONFIGURATION WITH CENTRALISER

CONFIGURATION WITHOUT CENTRALISER

The Wi-Fi module can be connected directly to the MRV series 5 outdoor units, or to the HA-MA164AD converter connected to other non-series 5 MRV outdoor units.

With this system you can control the MRV system even without a centraliser installed, but through the APP alone by ensuring adequate Wi-Fi coverage to the module.

If used independently (not connected to a central lized controller) it is necessary to provide 12 DC electric supply (not provided by Haier) and the provided of the provide

EXAMPLES OF CONNECTION FOR THE "HI-WA164DBI" WI-FI MODULE ACCORDING TO THE TYPE OF SYSTEM AND THE EXPECTED PRODUCTS

If used independently (not connected to a centrallized controller) it is necessary to provide 12 DC electric supply (not provided by Haier)

CONNECTION OF CENTRALISED CONTROLLERS DIRECTLY TO OUTDOOR UNITS

CONNECTION OF CENTRALISED CONTROLLERS IN AN INTERNAL POINT OF THE PLANT IN THIS CONFIGURATION, THE 5 SERIES UNITS ALSO REQUIRE THE HA-MA164AD ACCESSORY

CONNECTION OF CENTRALISED CONTROLLERS IN MIXED MRV AND SUPERMATCH SYSTEMS **ONLY FOR HC-SA164DBT**

CONNECTION OF CENTRALISED CONTROLLERS TO SYSTEMS COMPOSED ONLY OF **SUPERMATCH UNITS**

CONNECTION OF THE CENTRALIZED CONTROLLER IN MRV-SUPERMATCH MIXED SYSTEMS **ONLY WITH HC-LA1CDBT**

REMOTE CONTROLLERS

Haier offers different types of remote controllers to choose from based on your functional and design requirements.

YR-HQS01 **R32** + **R410A**

- On/Off. Operation Mode. Fan speed. Temperature setting. Swing
- Turbo and Quiet
- Individual louver control for "Round flow cassette and Cassette 620
- Clock & Timer
- Health function
- Self-Clean
- Backlight

HA-SB101DB **R32** + **R410**A

- · Infrared signal receiver
- Realize the remote control of duct type indoor unit
- Model selection depends the duct indoor unit

HW-BA101ABT **R410A**

- Modern, high-intensity LED design
- Full touch black display. Automatic lighting when the keys are pressed. Black screen at rest position.
- · NOT equipped with a clock or timer
- Double temperature and fan speed setting mode; a continuous infinite range or by acting on the classic + and -
- Quiet operation
- Operating mode, deflectors in on / off mode
- Possibility of group control of up to 16 indoor units with the same operating mode
- · Limited features ideal for hotels
- Filter cleaning interval indication
- Error control
- · Function block from centraliser

86mm 12mm - 86mm -

HW-SA201ABK **R410A**

- Modern, high-intensity LED design
- Full touch black display. Automatic lighting when the keys are pressed. Black screen at rest position.
- · NOT equipped with a clock or timer
- Double temperature and fan speed setting mode; a continuous infinite range or by acting on the classic + and -
- · Quiet operation
- · Operating mode, deflectors in on / off mode
- · Possibility of group control of up to 16 indoor units with the same operating mode
- · Limited features ideal for hotels
- Filter cleaning interval indication
- · Error control
- · Function block from centraliser

NEW HW-BA316AFK **R32** + **R410**A

- Two core non-polarity wiring, installation convenience
 Basic function: on/off, mode, fan speed, temperature setting
 Individual & group control (max. 16 indoor units)
- Built-in infrared signal receiver for infrared remote control
- R32 visual and acoustic leakage alarm

NEW HW-PB101AFK **R32** + **R410**A

- Two core non-polarity wiring, installation convenience
- Individual & group control (max. 16 indoor units)
- Basic function: on/off, mode, fan speed, temperature setting
- Built-in infrared signal receiver for infrared remote control
- Built-in buzzer
- R32 visual and acoustic leakage alarm
- IDU & ODU parameters checking

NEW HW-SA301AFK **R32** + **R410**A

- · Two core non-polarity wiring, installation convenience
- IDU & ODU parameters checking
- Individual & group control(Max. 16 indoor units)
- On/Off, mode, fan speed, temperature, swing
- °C/°F, Temp. adjustment sensitivity ±0.5°C(±1°F)
- · Backlight off
- Built-in infrared signal receiver for infrared remote control
- Individual louver control for round-way cassette
- R32 visual and acoustic leakage alarm
- · Self-cleaning function

EXAMPLES OF CONNECTION OF REMOTE CONTROLLERS AND WI-FI MODULES

Example of single controller connection for independent operation of each indoor unit

Example of group controller (only for wired controllers - max 16 indoor units on a single controller)

In a group management with a single wired controller, the functions and operating modes of all the internal units connected to that controller will be identical to each other. Independent management is not possible. Each command given will be replicated on all the indoor units in the same way.

Example of a Wi-Fi module connection, for independent operation of each indoor unit

Example of group management through Wi-Fi module

Connect only one Wi-Fi module on the same Master unit, where the group wired controller is connected. Each command given through the APP, as for a group wire controller, will be replicated in the same way on all the indoor units connected to that wi-fi controller / module.

Infrared receiver on controller.

Wired controller models: HW-BA136AFK, HW-SA301AFK and HW-PB101AFK are equipped with receiver for wireless remote controllers. This function allows you to control an indoor unit with the wired controller and with a remote control simultaneously. (example: wired controller on the wall and remote controller on the desk or on the bedside.)

INTEGRATED MANAGEMENT SYSTEM FOR MEDIUM AND LARGE BMS PLANTS

HCM-01A LOCAL MANAGEMENT SYSTEM FOR MEDIUM-SIZED PLANTS

- MRV plant supervision and management system for local use on PC.
- RS-485 protocol converter in RS-232 via USB adapter for local use on PC.
- Control max 400 units and/or maximum 32 independent cooling circuits
- Each cooling circuit requires HA-MA164AD adapter (except for outdoor unit series 5)
- Management of all system parameters by zones / groups / individual units, weekly and monthly timers, error management and alarm history.
- · Clear and intuitive visualisation software
- · DOES NOT allow management via web/Internet
- The software works on Windows platform (7 32/64 bits 8 Pro 10 Pro)
- The software has a license for use on a single PC. If you plan to use on two or more PCs, you need to purchase 2 or more licenses
- Possibility of accounting for electricity consumption. Providing IGU-02 adapters instead of HA-MA164AD. One IGU-02 for each cooling circuit, also for series 5 outdoor units. For each cooling circuit / IGU-02, a "Wattmeter / pulse generator" must be provided which detects the energy absorption of the outdoor units and proportionally generates counting pulses that the IGU-02 adapter receives and transforms into values to be managed and visualised by the software (the pulse generator wattmeter / ammeter is not supplied by Haier, as it must be selected and sized according to the power of the plants).

INDICATIVE DIAGRAM FOR LOCAL MANAGEMENT WITH HCM-01A

INDICATIVE DIAGRAM FOR LOCAL MANAGEMENT WITH HCM-01A AND CONSUMPTION ACCOUNTING

HCM-06B MEDIUM PLANT MANAGEMENT SYSTEM WITH WEB / INTERNET CONTROL FUNCTION INTEGRATED SYSTEM FOR PLANTS UP TO 250 INTERNAL UNITS

- •Remote monitoring version
- •Third party interface: BACnet ip and Modbus tcp
- •Max. 250 indoor units can be controlled for HCM-06B
- •Max. 32 systems for HCM-06B. Each system requires one HA-MA1ADB.
- •Operation status setting & monitoring
- •Schedule setting
- •Multi user management with different authorized levels
- •Electricity charge report (must use HA-MA1ADB)
- •Operation and error history log
- •Cooperated technology with honeywell

(the pulse generator wattmeter / ammeter is not supplied by Haier, as it must be selected and sized according to the power of the plants).

ILLUSTRATIVE DIAGRAM FOR MANAGEMENT VIA WEB WITH HCM-06

ILLUSTRATIVE DIAGRAM FOR MANAGEMENT VIA WEB WITH HCM-05 WITH CONSUMPTION ACCOUNTING

22 name 107 Separation St. 7. Haier Electricity Bill:102 Electricity Bill:103

Monitoring

Independent control of up to 500 indoor units

- Mode, temperature, ventilation, deflectors
- Blocking of user functions
- Controlling of blocking levels
- \bullet An icon with all the information for each individual unit

Energy consumption report for each unit

- Possibility of defining different costs by usage ranges
- Preview and print the results
- Comparison of operating costs over time

Programming

- Weekly and monthly schedule graph
- Free configuration
- Defining sample programmes

Zone control

• Creation of zones for management that can be customised according to the requests

Alarm management

- History of alarm messages
- Detail of every single alarm

System configuration

- Building-based configuration
- Equipment configuration
- Management of access levels
- Management of parameters

HCM-03A LARGE PLANT MANAGEMENT SYSTEM WITH WEB/INTERNET CONTROL FUNCTION INTEGRATED SYSTEM FOR PLANTS UP TO 1500 INDOOR UNITS

- Local control over the network from PC or remotely via web/internet.
- Each HCM-03A adapter is equipped with a web browser integrated with a specific IP address.
 Requires a connection to a network with internet access, via ethernet cable. Once configured, anywhere in the world simply enter the IP address supplied with the HCM-03 in the web search engines Google Chrome or Firefox to access the system to be controlled. Access to specific system management is protected by multi-level passwords.
- Possibility of communication with systems, not supplied by Haier, through the BACnet IP, Modbus protocol.
- Max 1500 controllable indoor units.
- Up to 20 independent cooling circuits can be connected to one of the four available ports, in order to obtain a system that provides a maximum of 80 circuits. Each cooling circuit requires HA-MA164AD adapter (except for outdoor unit series 5)
- Management of all system parameters by zones / groups / individual units, weekly and monthly timers, error management and alarm history. Clear and intuitive visualisation software
- Possibility of accounting for electricity consumption. Providing IGU-02 adapters instead of HA-MA164AD. One IGU-02 for each cooling circuit, also for series 5 outdoor units.
 For each cooling circuit / IGU-02, a "Wattmeter / pulse generator" must be provided which detects the energy absorption of the outdoor units and proportionally generates counting pulses that the IGU-02 adapter receives and transforms into values to be managed and visualised by the software. (the pulse generator wattmeter / ammeter is not supplied by Haier, as it must be selected and sized according to the power of the plants).
- Possibility to insert the building layout as a file in the HCM-03A system to create specific command buttons within the reference rooms via the loaded floor plan.
- Technology developed in collaboration with MAC mini.

ILLUSTRATIVE DIAGRAM FOR MANAGEMENT VIA WEB WITH HCM-03A.

ILLUSTRATIVE DIAGRAM FOR MANAGEMENT VIA WEB WITH HCM-03A WITH CONSUMPTION ACCOUNTING

SIMPLE AND INTUITIVE NAVIGATION

Building layouts can be inserted as a file in the HCM-03A system to configure by positioning the specific indoor unit and the dedicated controller.

The creation of specific command buttons inside the premises allows direct management of the floor plan, simulating reality more accurately which makes everything more intuitive and simple.

HA-MA164AD (MODBUS ADAPTER)

- Haier to MODBUS protocol converter (not required for series 5 outdoor units)
- Each cooling circuit requires 1 converter
- 1 converter can handle max 64 indoor units on single cooling circuit
- Power supply transformer included
- It is not possible to account for electricity consumption

IGU02 (ADAPTOR TO ACCOUNT FOR CONSUMPTION)

- Haier protocol converter to RS-485 to be used in conjunction with BMS systems: HCM-01A / 03A / 05-05A, necessary if you want to monitor the electrical consumption of MRV systems.
- Each IGU-02 can control up to a maximum of 40 indoor units
- You need an IGU-02 for each cooling circuit, even for outdoor 5 series.
 For each cooling circuit / IGU-02, a "Wattmeter / pulse generator" must be provided which detects the energy absorption of the outdoor units and proportionally generates counting pulses that the IGU-02 adapter receives and transforms into values to be managed and visualised by the software (the pulse generator wattmeter / ammeter is not supplied by Haier, as it must be selected and sized according to the power of the plants).

IGU07 (LONWORKS ADAPTER)

- Modbus > Lonworks protocol converter
- Each IGU-07 can control only 1 cooling circuit and up to a maximum of 32 indoor units
- The cooling circuit connected require adapter HA-MA164AD (except for series 5 outdoor units)
- The IGU07 adapter does not have a power transformer, therefore it is necessary to have a 24 Volt DC power supply (24 VDC) fitted by the installer.
- · It is not possible to account for electricity consumption

HA-AC-KNX (KNX ADAPTER)

- Haier to KNX protocol converter
- Requires HA-MA164AD adapter
- 3 available models, up to 8, up to 16 and up to 64 controllable indoor units (HA-AC-KNX-8, HA-AC-KNX-16, HA-AC-KNX-64)
- Does not require power supply

HCM-04

- BACnet gateway, convert modbus rtu to BACnet ip
- Max.128 indoor units/ 4 systems can be controlled. Max. 32 indoor units for one system
- MRV 5 and upgraded MRV SII (8/10/12HP) can connect directly with HCM-04.
- Other MRV systems require IGU02 or HA-MA164AD
- BTL certificate

MTC-001

Application Scenario:

- a. The multi tenant site using separate circuit breaker for each indoor unit
- b. The hotel room using key-tag system which cuts off the power of indoor unit directly
- When it is detected that any connected indoor unit is forcibly cut off, the MTC-001 provides DC
 power to the indoor PCB to ensure that the indoor unit maintains standby mode: the EEV is turned
 off and the control signal is blocked to prevent the system from alarming
- Note: If there is power or communication failure in the indoor computer board, MTC-001 cannot be prevented and detected

ADDRESS SETTING AND CHECKING TOOL YR-NS
